

AWS EFS(Elastic File System)

Sohel Pathan 27/08/2024

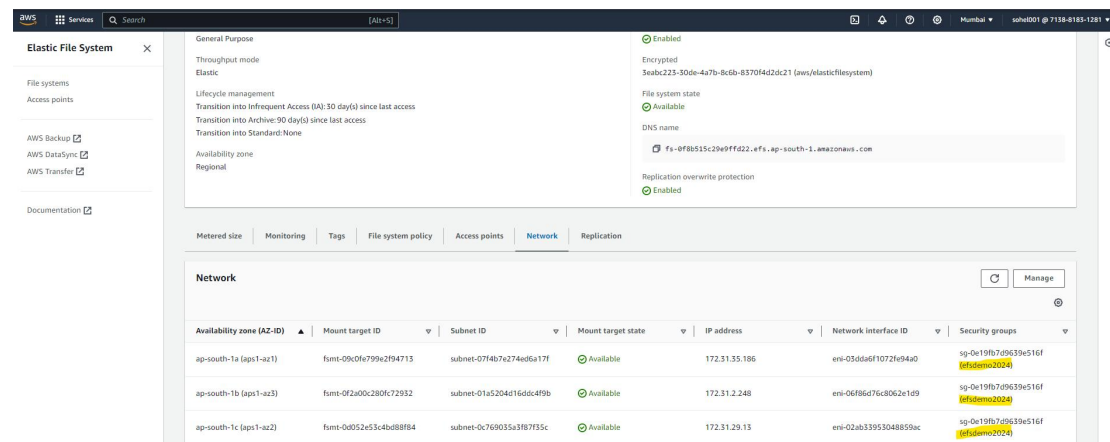

1. Create EFS file system

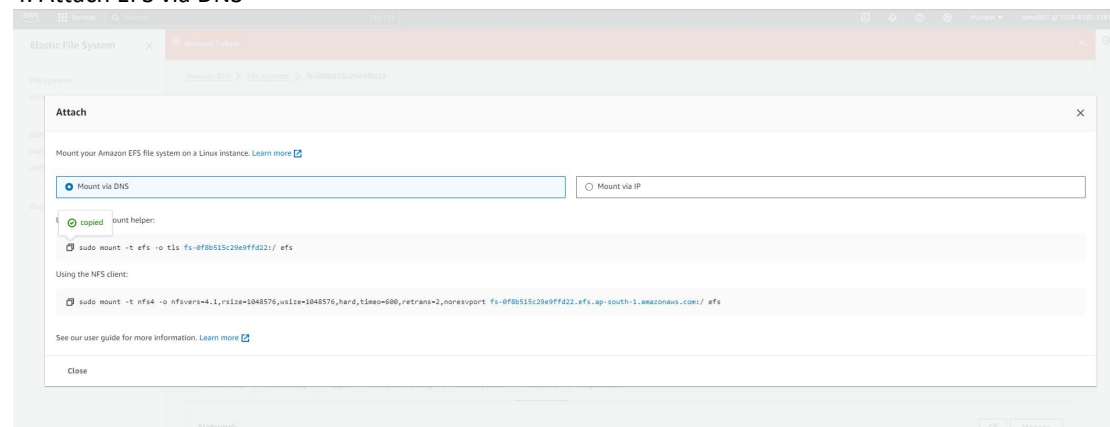

2. Create 2 instances with two AZ having security group with port NFS (2049)

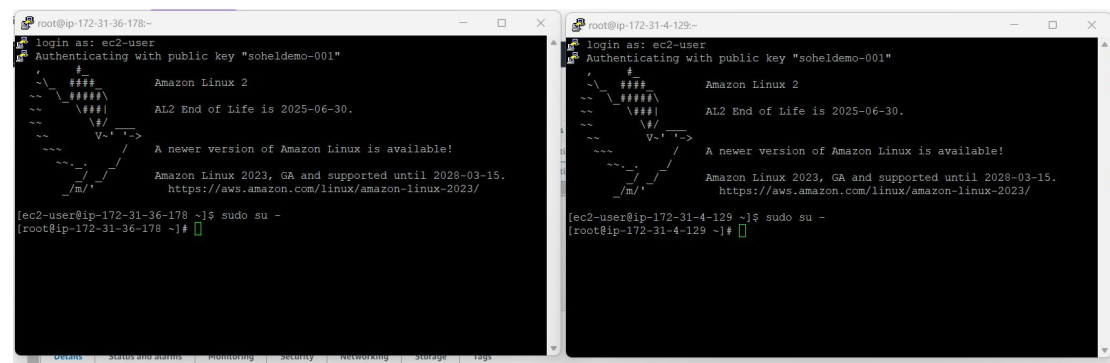

3. Security group mounted on EFS(Elastic File System)

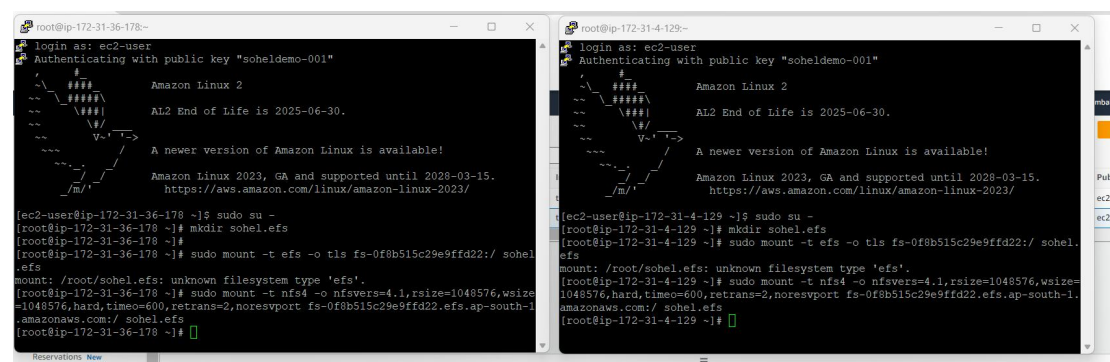

4. Attach EFS via DNS

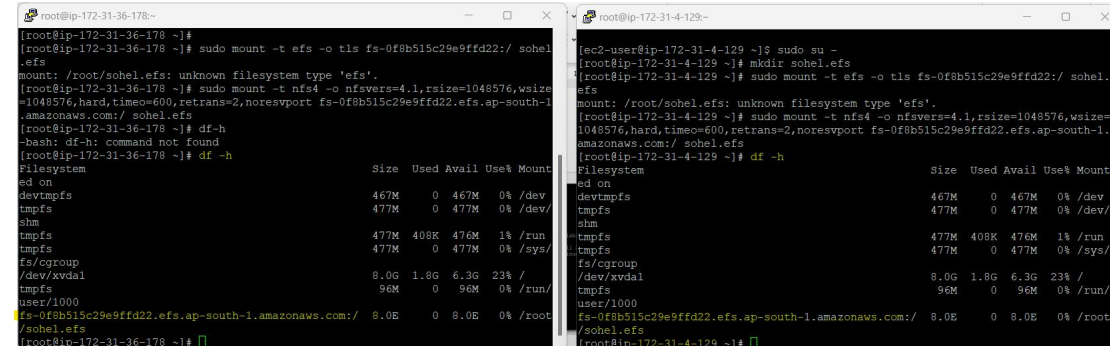

5. Conect both instances via Putty

6. Create directory on both instance and via EFS command

7. EFS have been successfully mounted on vm

8. now create file in 1a it visible in 1b
